

GIBA Toll Building Alterations and Reroof Project  
Update 11/8/17  
Contract Duration: 90 days from permit issue date of 9/29/17

Week Five:

The three lower roofs are framed in and the stucco subcontractor is working on the overhead roof. Question of the week: Why did you raise the roof of the toll plaza? Answer: The overhead replacement roof is the same height. Each of the lower three roofs was raised 2 ½ feet for easier maintenance of the a/c units.

During active construction hours Monday-Friday two on island traffic lanes will remain open with the exception of material deliveries or equipment shifts. There will be lane shifts during the course of the project therefore all traffic should approach the toll plaza at 5 mph. Workmen will be present and the speed limit will be strictly enforced.
